

Instructions for Preparing for your Project 2 Demo

1. Preparing your data before the demo
 - a. Drop all your triggers for project 2 (make sure you save a copy before you drop them)
SQL> drop trigger trigger_name;
 - b. Save the provided proj2_demo_tables_script_2018.txt (see Project 2 folder) in file Proj2data.sql in your bingsuns account.
 - c. Initialize your tables by executing the following:
SQL> start Proj2data
 - d. Create all your triggers again.

When you come to do your demo, all of your tables **MUST** contain **EXACTLY** the same data as provided by the instructor from the above script. If your tables do not satisfy this requirement, you will be turned away from the demo to reload the data and you will lose 2 points.

You may add the dropping trigger statements at the beginning of the script file and add the creating trigger statements at the end of the SQL script file to simplify your task (i.e., steps (a) and (d) can then be done in one step).

2. When you come to do your demo, all members of your team must be present. You **MUST** bring the hard copy of your project report for the team (PL/SQL code with documentations, team report if your team has more than one member, personal report(s)) with you.
3. You can do your demo on your laptop (especially if you have a GUI). Make sure it's ready to go (code has been compiled) when you come to do the demo. You only have 15 minutes for your demo.
4. If you did not come to do your demo at the time slot you signed up or you are late by more than 2 minutes for your demo, you will lose 2 points and your demo will be rescheduled within 24 hours.
5. During the demo, you will be asked to perform several specific tasks and **each member may be asked to explain the project**. If your program has problem(s), you will be given ONE chance to fix the problem(s) and reschedule the demo within 24 hours. Two points will be taken off if this happens. Each team has only ONE chance to schedule another demo. You are not allowed to fix your code while doing the demo.

If you come unprepared (e.g., tables are not initialized correctly, fail to come for your demo, late for your demo), you will lose 2 points automatically and will have just one chance left to do your demo.

6. A team will receive 0 points for Project 2 if the team failed to do the demo to the instructor.
7. Remember to submit the source code (both Java and PL/SQL) with a clear readme file to the Project 2 submission folder in MyCourses. Your package and the readme file should allow the TA to run your code. It is recommended that you submit the source code after your team has completed the demo. All source code must be submitted within 2 hours of your successful demo.
